

## **How to administer Orbeseal & Dry Cow Therapy**

Orbeseal does not contain antibiotics and so scrupulous hygiene during administration is essential.

Preparation is everything and a small amount of extra time will pay dividends.

Our advice is;

1. Strip out all quarters.
2. Wear clean gloves during for the drying off procedure
3. Teat dip the two teats furthest from you.
4. Wipe off this solution off with clean dry paper towel
5. Scrub the teat end with Mediwipes or cotton wool and surgical spirit until no more dirt appears on the Mediwipe or cotton wool.
6. Infuse dry cow therapy
7. Then infuse Orbeseal pinching the teat half way up to ensure the Orbeseal sits at the base of the teat.
8. Repeat the above procedure for the two nearest teats.
9. Teat dip all four teats
10. Check cows after drying off at least daily as you would normally do
